## **Betamesh-PLUS – New Developments in our Product Portfolio**

Dar Sir/Madam

We are pleased to inform you that we have expanded our highly successful Betamesh range with the addition of a number of options with even finer dimensions. From 1 November 2021, we will be offering you an even more comprehensive product portfolio.

The offer includes six additional specifications with even narrower apertures in the range of five to twelve microns, significantly expanding application potential. In addition, innovative R&D work has led to a new basis of calculation for geometric pore size, which is why the existing mesh types (with a few exceptions) have also been redesigned. Use of the „PLUS“ in the name identifies our additional offer and the more cohesive increments in the existing mesh types.

In order to simplify the changes for you, you will find a conversion chart on page two. Please access the new technical data either from the enclosed brochure or from our website.

If you would like to continue to order the original Betamesh meshes according to existing item numbers, rest assured that you will receive your specification simply with the new description and with current technical data.

We are convinced that we can now offer you an even more attractive palette of products from our high end filter mesh portfolio and would be pleased to provide you with a personal explanation of the advantages, alongside the enclosed brochure. Please contact us.

Best regards

The BOPP Team
