«THE ART OF SWISS PRECISION»

BOPP – World Leaders in High Tech Meshes

Zürich Headquarters

Headquartered in Switzerland, G. BOPP + Co. AG is one of the world's leading producers of precision woven metal meshes for the most diverse range of applications. Established in 1881, we have evolved from the manufacture of coarse meshes to the production of high tech fine wire meshes, with wire diameters of less than 0.015mm – just a quarter of the width of a human hair.

We breathe new life into your filter elements

The longevity of our products is a key issue for BOPP. Our services don't stop at delivery. When wear limits are reached, we offer as an alternative to total replacement the opportunity to pass used filter frames back to us for tensioning using new mesh. This not only saves on costs but also protects the environment.

To refresh the filter frames, we work closely with selected partners, who are committed to the same superior manu-

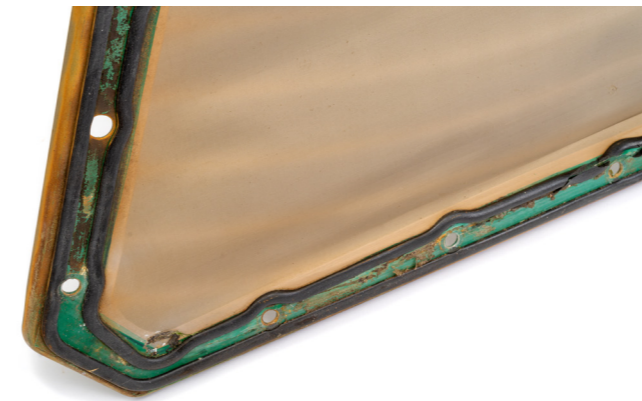

facturing standards as ourselves. The filter frames are aspirated, primed and passivated before they come back to us in virtually new condition.

In our professional in-house fabrications division, we tension the frames using a multi-stage process and new filter meshes, and prepare them for re-installation.

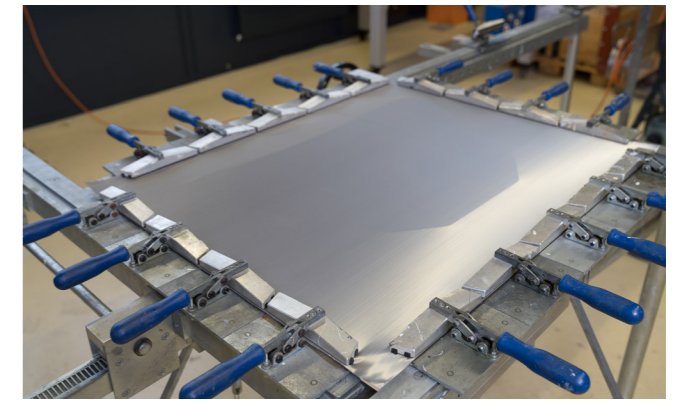

Proven sustainability

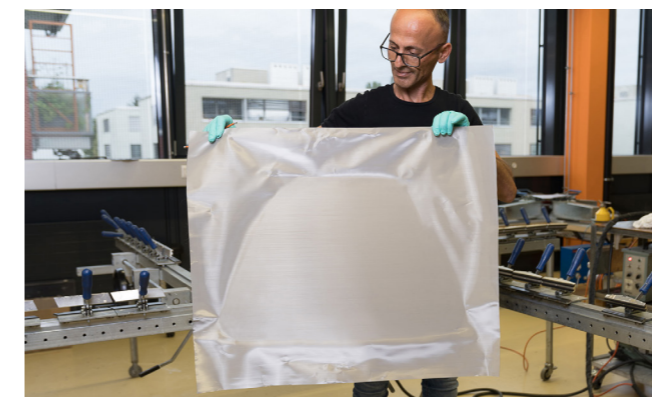

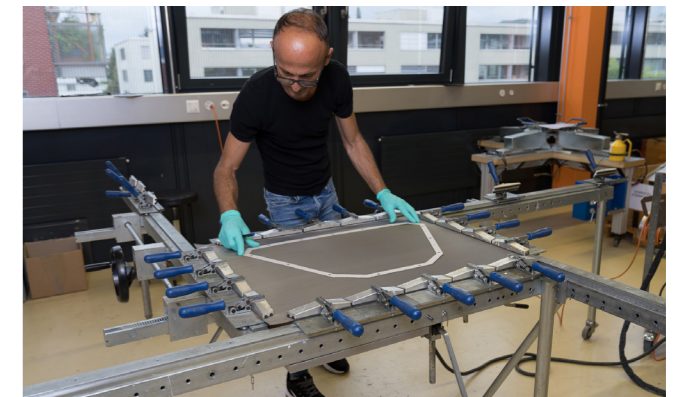

Used meshes are recycled to protect resources.

Frames sent to us are prepared externally in multi stage processes and then tensioned in-house on our specially designed stretchers.

Meshes are tensioned to the required levels and attached to the frames. Our extensive experience ensures that the meshes will not lose tension over time.

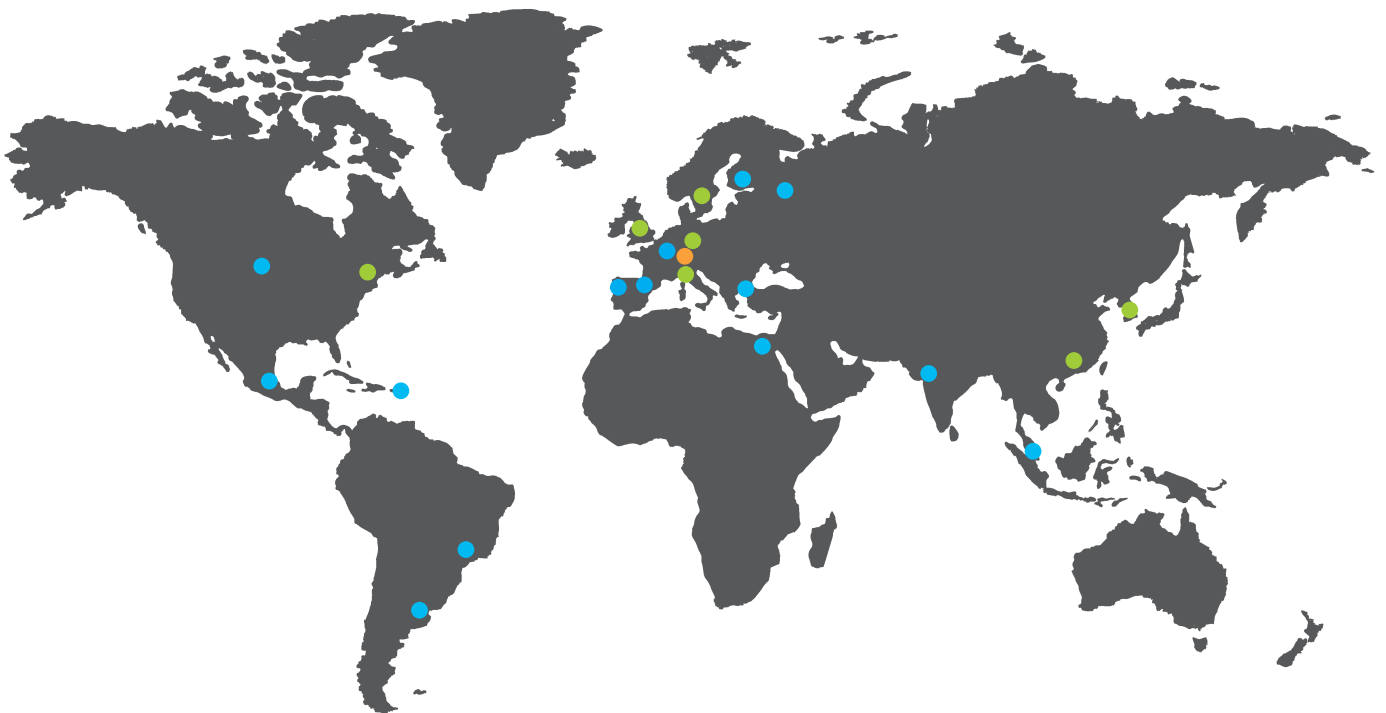

For additional protection, we bond the mesh to the filter frames.

The filter frames are then hand finished before being delivered back to our customers.
